

INGENIUM Challenge lab 2024

The **INGENIUM** partner universities organize the Challenge Lab linked to the United Nations Global Sustainability Goals and gives you the chance to dive head on into the problem.

Through six online workshops (**from October to December**), participants will identify complex challenges and problems that our society is facing and how sustainable development goals are interconnected and integrated into all challenges. The course we present are related to the UN great transitions. **UNSDG | Six Transitions: Investment Pathways to Deliver the SDGs.**

The course is divided into six online workshops consisting of both lectures and discussions, based on a real life challenge an external partner (company or Non-Governmental Organisation) will present. Topics include climate change, food systems, energy, health, sustainable mobility, education and social security – all related to the three pillars of sustainability: social, environmental and economic.
